SUMMARY

Computer Science undergraduate at Anurag University (CGPA 9.6) building full-stack web and Android applications with Next.js, React, TypeScript and Firebase. Built three end-to-end projects, including a real-time cafe operations platform, a live blood-donation platform and an Android release candidate. Seeking a software engineering internship where I can own features from the interface to the data layer.

EDUCATION

Anurag University, Hyderabad 2025 - 2029 (Expected)
B.Tech in Computer Science & Engineering · CGPA: 9.6/10

MJP Junior College, Munugode 2025
Intermediate (MPC) · 98.7% (987/1000)

MJP Munugode Boys School, Munugode 2023
Secondary School Certificate (SSC) · 9.5 CGPA

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C, SQL
Frontend: React, Next.js, React Native, Expo, Tailwind CSS, HTML5, CSS3
Backend & Data: Node.js, Express, REST APIs, Firebase Auth, Firestore, MongoDB
Tools: Git, GitHub, Vercel, Postman, Cloudinary, EAS
Fundamentals: Data Structures & Algorithms, OOP, DBMS, Operating Systems

SELECTED PROJECTS

Guessify — Android number-guessing game 2026
Expo, React Native, TypeScript, Firebase, Firestore · Android 1.1.0 release candidate

- Built solo and 1v1 modes with three difficulty stages, four-way directional feedback, tactical hints, scoring, six tiers and weekly, monthly and all-time leaderboards.
- Designed a serverless duel model where the setter's device acts as referee; Firestore rules and transactions keep the secret out of the database and prevent double-scoring.
- Added guest and email authentication, cloud sync, an offline outbox and in-app account deletion; 19 engine tests and 28 security-rules tests pass.

Aroma Cafe — cafe storefront and operations dashboard 2026
Next.js 16, React 19, TypeScript, Firebase, Tailwind CSS, Cloudinary, Leaflet · Live

- Built three surfaces on one Firestore schema: a customer storefront, a real-time kitchen dashboard with live order tracking, and a rider delivery view with reservations, reorder and coupons.
- Moved checkout, reservations, coupons, email and Cloudinary uploads into Zod-validated Server Actions; an admin custom claim and Firestore rules protect every privileged write.
- Replaced a paid directions API with a custom Dijkstra router, Leaflet map, haversine step detection and voice prompts.

Live: aromacafe.eu.cc

BloodLine — real-time blood donation platform 2026
React 18, TypeScript, Firebase, Tailwind CSS, Vite · Live

- Built four role-based dashboards for donors, receivers, hospitals and admins, with blood-group matching, city-scoped SOS alerts, hospital inventory and notifications.
- Enforced the open → accepted → completed → verified request lifecycle inside Firestore transactions, preventing duplicate claims and double-credited donations.
